

Welcome to the ClearDATA customer documentation for Azure.

ClearDATA's platform handles all of the security and compliance aspects of running healthcare applications in the Azure cloud. This is done via ClearDATA's self service and managed services model. Self service allows companies to iterate at scale. Managed services help customers who are new to the cloud and need operational assistance. No matter which model you use you can take a look at our [Compliance Reference](#) to see precisely what ClearDATA controls are checking and what they are remediating. For customers who would like to accelerate their cloud adoption, ClearDATA offers professional services to come in and engage with your company for a more focused endeavor.

Develop a deep understanding of the ClearDATA Azure Platform.

Controls we implement per service and provides service-specific guidance on staying compliant on your end.

Perform specific tasks.
